Reviews

Amazing presentation! I was engaged the entire time!

Found this course to be fascinating and would love to get more knowledge in this area. There was so much good information that would be helpful to patient's overall health.

This was very informative and should be included in all dental curriculum! We see patients with functional difficulties that go undiagnosed and untreated. We are in a perfect position to recognize and recommend life altering treatment/ therapy referral. A primary care physician may refer to us or possibly an ENT. It is our responsibility to be knowledgeable beyond prophylaxis, periodontics, decay and orthodontics.

I have always been curious about this topic and what changes have come of it. So Happy to see that this is connecting a lot of health professionals for treating the entire body,

Excellent program! I learned so much and want to learn more. She motivated me to expand my knowledge and look into a broader field of treatment.
